Dear Mrs Robb.

It was refreshing to read your coloumn about jackie kenneday
we are sick and tired of reading about this woman all she does is go from place
to place having a damm good time .she loves the limelight and will do mast anything
to get into the papers and news . god forbid that bob kenneday gets to be the
president then the country will be run by the whole family we are tired of the
whole lot of them . her brother is all^{way} talking about the poor but he does nothing
about them they have millions ?why dont they build a home for orhans or do ~~some~~
something worth while . and why does he make a freak out of himself with his hair
he looks like a woman with the way he lets it grow. I think nixon will make a g
ood president . he would put these colored people in there place .the white folk
are tired of being pushed around by the martin king. someone should pop him off .
he.s a coward he runs when theres shooting .the men and woman in this country
oday have enough prolemns with a war going on and the high price of living .
ithout these black demons causing all the trouble in our citys and towns .and ge
etting away with it .if they let them get away with stuff like that in washington
we may as well give up .

Sincerely a regurlar readers of your
coloumn.

LESSON CORRECTION

Lesson No. 1

The successful completion of any key fitting assignment depends entirely upon directing your efforts and attention to spacing and shaping the key cuts to conform to manufacturing standards so that the key you fit will operate smoothly and dependably.

Let's review some of these important details and apply them to every key fitting assignment.

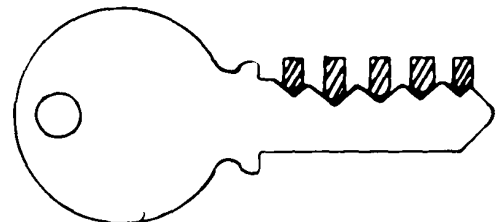

First of all the spacing of the cuts must be accurate so that the pins or discs will sit in the very bottom of the cuts. If the spacing is not accurate the tumblers will sit on the slopes of the cuts like this: This will cause you to file the cuts deeper than necessary and the pins will sit at different heights each time the key is inserted in the keyway.

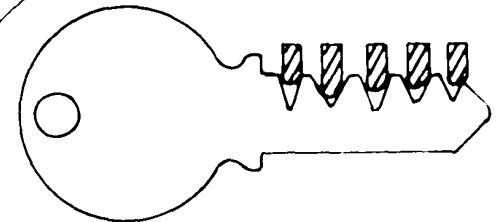

Assuming now that the cuts are spaced accurately, let's take a good look at the importance of the angle formed by the slopes of the cuts.

For general key cutting the standard angle formed by the slopes is 100 degrees. This angle provides enough room for the pins or discs to seat in the very bottom of the cut and presents a gentle slope for the pins to ride up on when the key is inserted and withdrawn. The angle also eliminates those high, steep points between cuts that appear when the angle is not correct.

NOTE: Use key gage supplied in Lesson #2 to help you maintain the correct angle as you file for depth.

When the angle is not correct, or too steep, the pins hang between the slopes like this: Again the cuts will be deeper than necessary, weakening the key and preventing the pins or discs from meeting at the shear line each time the key is inserted in the plug. The very steep slope and high, sharp points between the cuts makes insertion and withdrawal of the key difficult and will cause excessive wear. Worst of all the pins or discs can get wedged in the cut, trapping the key in the plug.

Students very often want to know about the shape of the bottom of the cut. The bottom of the cut can be rounded or flat. This provides a base for the pins or discs to rest on and a tolerance for minor deviations in spacing.
